

Hostel and Mess Management System

A Database Management Project

Submitted By: **Vaibhav Dobhal**

SAP ID: 590017086

Roll No.: 24010111776

Batch : 30

Submitted To: **Prof. Shareef Babu**

Project Overview & Core Technologies

This web-based system streamlines hostel and mess operations, centralizing key functions to enhance administrative efficiency.

Frontend

HTML/CSS: Crafting an intuitive and clean user interface for seamless interaction.

Backend

Python Flask: Powering the application logic, routing, and request handling with robust Python scripting.

Database

MySQL: Securely storing and managing all relational data, ensuring consistency and integrity.

System Objectives: Core Functionalities

The system is designed to provide comprehensive digital solutions for efficient hostel and mess administration.

1

Student Records

Create and maintain structured digital student records.

2

Room Allocation

Digitally allocate and track hostel room occupancy.

3

Mess Attendance

Log daily meal attendance for precise tracking.

4

Fee Management

Record and monitor hostel and mess fee payments efficiently.

5

Complaint System

Maintain a centralized system for complaint submission.

6

Centralized Dashboard

Provide an intuitive dashboard for streamlined navigation.

7

Quick Search

Enable rapid search of student data by roll number or name.

Architecture & File Structure

The system employs a robust three-layer architecture and a well-organized file structure for efficient management.

Three-Layer Architecture

User Interface (HTML/CSS) → Application Layer (Flask) → Database Layer (MySQL). Each component communicates seamlessly via HTTP requests and SQL queries.

Backend Folder

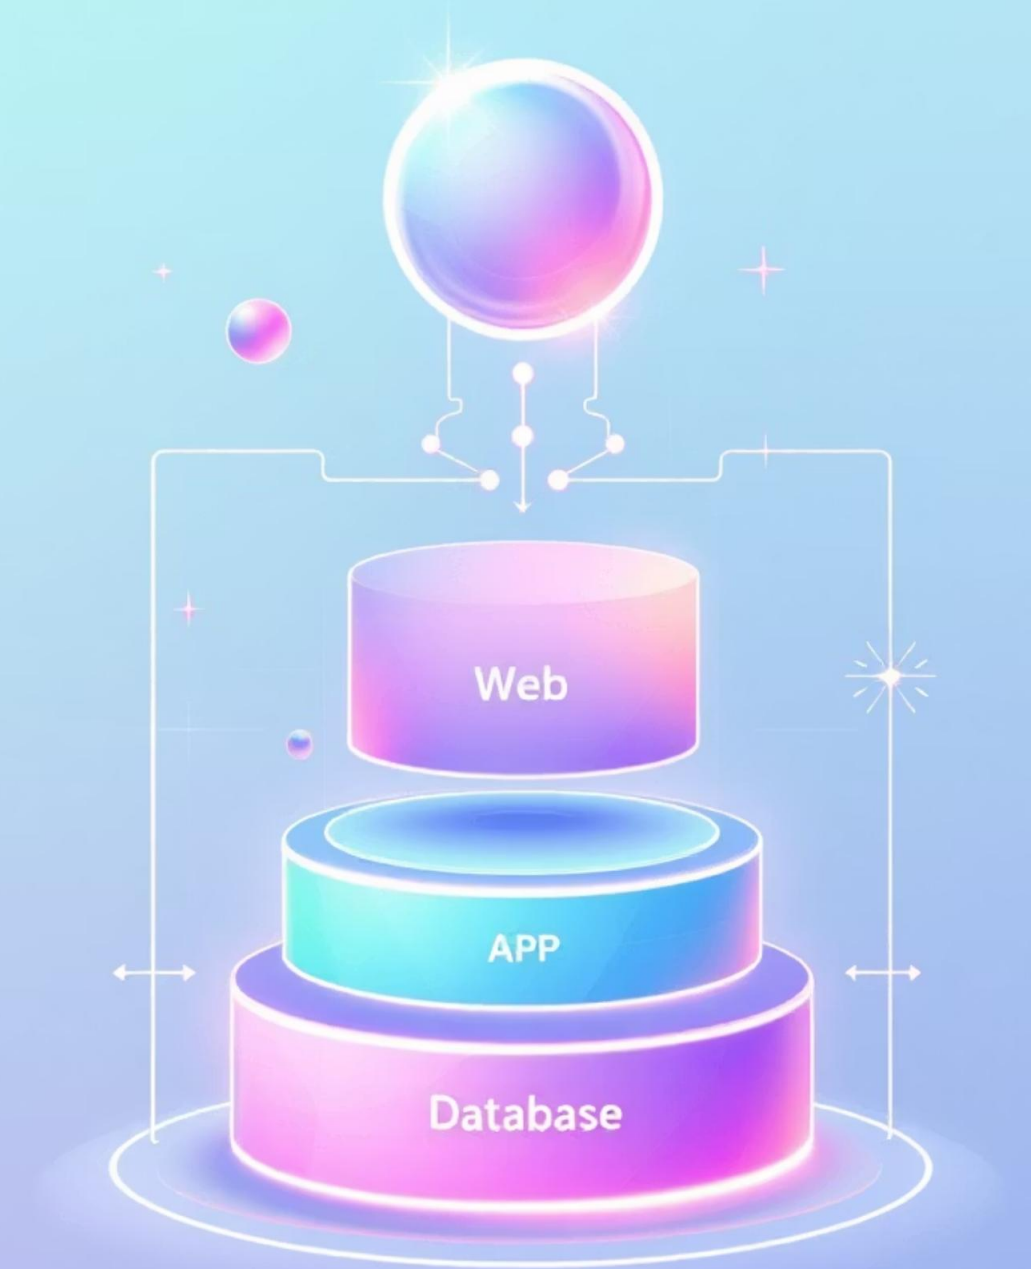

- Main script defining routes for all management modules.
- Database connector linking Flask to MySQL.

Frontend Folder

- Individual webpages for Login, Dashboard, and all operations.
- Global CSS file ensuring consistent design across all pages.

Database Folder

- Full SQL schema defining tables for students, rooms, fees, etc.

Key Modules: Internal Workings

Each module is designed for a specific administrative task, ensuring comprehensive and integrated management.

01	02	03
Login System	Student Management	Room Allocation
Admin credentials verified for secure dashboard access.	Add and view student details in a dedicated database table.	Assign rooms to students, with records saved and displayed.
04	05	06
Fee Management	Mess Attendance	Complaint Handling
Record and view hostel/mess fee payments efficiently.	Daily meal attendance (breakfast, lunch, dinner) logged.	Students submit complaints via admin form for review.
07		
Search System		
Quickly find students by roll number or name.		

User Interface: Detailed Webpage Explanation

The system's user interface is composed of several distinct pages, each serving a critical role in the administrative workflow.

index.html - Admin Login

The secure entry point, requiring credentials for system access. Ensures authorized use.

admin_dashboard.html - Central Hub

The main navigation screen with buttons for all management modules.

add_student.html - Student Registration

Allows administrators to add new student records to the system.

view_students.html - Student List

Displays a comprehensive table of all registered students.

allocate_room.html - Room Assignment

Facilitates the assignment of rooms to students, updating records.

view_rooms.html - Room Occupancy

Shows a clear list of rooms and their assigned students.

Key Features & Functionality

The system delivers a suite of features designed to enhance every aspect of hostel and mess administration.

Comprehensive Student Management

From registration to record-keeping.

Streamlined Room Allocation

Efficient assignment and tracking of rooms.

Mess Attendance Monitoring

Accurate daily logging for all meals.

Robust Fee Record Management

Tracking payments for hostel and mess services.

Centralized Complaint Logging

A clear system for submitting and reviewing grievances.

Intuitive Search Functionality

Quick access to student information.

Admin-Only Secure Access

Ensuring data privacy and control.

Unified Navigation Dashboard

All operations accessible from a single hub.

Challenges and Future Scope

While functional, the system presents opportunities for significant enhancement and expansion.

Current Limitations

- **No update/delete operations:** Records cannot be modified or removed post-entry.
- **Basic security:** Passwords are not encrypted, posing a risk.
- **Static UI:** Lacks responsiveness and dynamic interaction.
- **Missing validation:** No checks for duplicate entries or room conflicts.
- **No student login:** Limited to admin access only.

Future Enhancements

- **Full CRUD functionality:** Enable editing and deletion of all records.
- **Role-based access:** Introduce logins for students and wardens.
- **Enhanced security:** Implement password encryption and stronger authentication.
- **Dynamic and responsive UI:** Integrate modern frontend frameworks.
- **Automated reports & analytics:** Generate insights from data (e.g., attendance graphs).
